Animal Feed Supplements are enzyme supplements, phosphate, calcium and trace mineral mixtures that can be given to grazing animals during the dry or rainy season. These animal feed supplements can be mixed with fodder and have an extra shelf life.

Animal nutrition focuses on the dietary needs of animals, primarily those in agriculture and food production, but also in zoos, aquariums, and wildlife management. Feed additives are products used in animal nutrition for purposes of improving the quality of feed and the quality of food from animal origin, or to improve the animals' performance and health, e.g. providing enhanced digestibility of the feed materials. Feed additives may not be put on the market unless authorization has been given following a scientific evaluation demonstrating that the additive has no harmful effects, on human and animal health and on the environment.

The major players in global Animal Nutrition market include Evonik, Adisseo, CJ Group, etc. The top 3 players occupy about 10% shares of the global market. Asia Pacific and Europe are main markets, they occupy about 60% of the global market. Minerals is the main type, with a share about 55%. Poultry Feeds is the main application, which holds a share about 46%.
