Anionic Surfactant is a surface active substance that contains wash active and degreasing abilities on the surfaces of metals. It lowers the surface tension of water and thus removes the dirt from the surfaces of the metals. Anionic Surfactant is one of the classifications of surfactants. In anionic surfactant, the hydrophilic part consists of negatively charged group.

Asia Pacific was the largest market for anionic surfactants in 2017, globally. High consumption potential, growing production capacities, competitive manufacturing costs, and high economic growth are the major driving forces for the market in the region. This dominance of Asia Pacific is mainly due to the increasing population and improving lifestyles at each financial stratum. The demand for anionic surfactants is dependent on their use in industries such as soaps & detergents and personal care products which contribute to more than 50% of its global demand.
