Anisotropic Conductive Paste (ACP) is a liquid material consisting of electroconductive particles uniformly dispersed within a highly-insulating adhesive component. A functional material, ACP produces an anisotropic conductive film through application and drying in the screen-printing process. It is capable of achieving all three of the following actions at a physical junction through a heat press process for several ten seconds: (1) forming an electric connection between electronic components; (2) retaining insulation between adjacent electrodes; and (3) bonding and fixing

The Anisotropic Conductive Paste (ACP) market is experiencing notable growth, driven by the increasing demand for miniaturized and high-performance electronic devices.?

Miniaturization of Electronics: The trend towards smaller, more compact devices necessitates advanced interconnect materials like ACP for reliable, fine-pitch connections.?

Energy Efficiency: ACP's ability to facilitate efficient electrical connections supports the development of energy-saving electronic products.?

Advancements in Consumer Electronics: Growing adoption of smartphones, tablets, wearables, and other consumer electronics fuels the demand for ACP in device assembly.?

The ACP market exhibits strong growth across various regions:?

Asia-Pacific: Dominates the market due to robust electronics manufacturing in countries like China, Japan, and South Korea.?
