Ankirin-G polyclonal antibody is a mixture of immunoglobulins produced against the specific antigen Ankirin-G. Polyclonal antibodies (pAb) are usually antibodies produced by multiple B cell clones, which can bind to different epitopes on the antigen, and the types of immunoglobulins may be different. Specifically, Ankirin-G polyclonal antibody contains antibodies against multiple different epitopes on the Ankirin-G antigen, which work together in the body. Ankirin-G polyclonal antibody can bind to multiple different epitopes on the Ankirin-G antigen, which enables it to more comprehensively identify the target antigen during detection or research. In general, Ankirin-G polyclonal antibody is an important research tool for Ankirin-G antigen, and has broad application prospects in biomedical research and clinical diagnosis.
