The global Antenna Evaluation Boards market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

The driving factors for the use of antenna evaluation boards include:

- 1. Design validation:** Antenna evaluation boards are used to validate the design and performance of antennas in specific applications or wireless systems. They help ensure that the antenna meets the required specifications, such as gain, radiation pattern, impedance matching, and bandwidth.
- 2. Performance evaluation:** Antenna evaluation boards provide a platform for evaluating and characterizing the performance of antennas. Users can test parameters like efficiency, polarization, radiation pattern, and impedance to understand how the antenna performs in various operating conditions and environments.
- 3. Prototyping and iteration:** Antenna evaluation boards enable rapid prototyping and iterative design. They allow designers to quickly test and modify different antenna designs, configurations, or materials to optimize performance, meet application requirements, and ensure compatibility with the target wireless system.
- 4. Cost and time savings:** Using antenna evaluation boards can significantly reduce the

time and cost associated with antenna development. They provide a ready-made platform for testing antennas, eliminating the need to design and manufacture custom test setups. This saves time in assembly and configuration and reduces costs related to equipment and testing resources.

5. Customization and integration: Many antenna evaluation boards offer customization options, allowing users to integrate the evaluation board into their specific wireless system or application. Users can modify connectors, add matching components, or incorporate other features to align the evaluation board with their system requirements.
