The global Anthracite Filter market size is predicted to grow from US\$ 545 million in 2025 to US\$ 667 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

In our report, we discussed the anthracite filter media, which are filtration materials for turbidity and SS removal. Since the specific gravity is lighter than that of Filter Sand, it is much used in combination with Filter Sand in dual-media filtration, to consist reverse grain layers after backwashing. In addition, because of high content carbon of this product, it has high resistance to various chemicals and high physical strength so that it is widely used for city and industrial water purification.

Global Anthracite Filters key players include Carbon Sales, Anthracite Filter Media, Xylem, CEI, Northern Filter Media, etc. Global top five manufacturers hold a share about 15%.

China is the largest market, with a share over 20%, followed by North America and Europe, both have a share over 35 percent.

In terms of product, Refined Anthracite Filters is the largest segment, with a share over 50%. And in terms of application, the largest application is Drinking Water Treatment, followed by Drinking Water Treatment.
