The global Anti-angiogenic Ophthalmic Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Anti-angiogenic ophthalmic agents act as antagonists against the vascular endothelial growth factor (VEGF). When retinal pigment cells become ischemic and dry up VEGF stimulates generation of new blood vessels by a process called neovascularization. If new blood vessels are not generated properly, leakage occurs in retina, which leads to vision loss. Angiogenesis plays an important role in chronic inflammation and fibrosis, tumor growth and vascularization of ischemic tissue.
