Anti-caking agents for feed are substances added to animal feed to prevent the formation of lumps or clumps, known as caking, during storage and handling. Caking can occur when the feed ingredients absorb moisture, leading to agglomeration and reduced flowability. Anti-caking agents help maintain the quality and free-flowing nature of the feed, ensuring that animals receive a well-mixed and nutritionally consistent diet.

According to our Feed Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
