The global Anti-cellulite Care Products market size is predicted to grow from US\$ 510 million in 2025 to US\$ 682 million in 2031; it is expected to grow at a CAGR of 5.0% from 2025 to 2031.

Anti-fat supplements generally refer to a class of nutritional supplements designed to help people manage their weight, reduce fat accumulation, boost metabolism or provide other related health benefits. These products often contain a variety of ingredients such as vitamins, minerals, plant extracts, amino acids, herbs and other compounds.

One of the key factors driving the growth of the global anti-cellulite care products industry is the increasing awareness about the myths surrounding surgical and non-surgical procedures for reducing fat. Surgical procedures such as mesotherapy and liposuction have certain side effects. For example, mesotherapy involves the use of multiple injections to inject a solution containing vitamins, minerals, hormones, and other ingredients into the subcutaneous fat, often causing side effects of swelling, rashes, infections, infections, and uneven skin. On the other hand, carboxytherapy, which has no proven side effects, is expensive and requires 7-10 sessions (each session costs about \$75 to \$200). In this case, non-invasive and topical treatments are considered more effective and less harmful because people can test them before ultimately using them. These factors will drive market growth during the forecast period.
