The anti-collision warning lens is a device that can detect obstacles ahead, such as other vehicles, pedestrians, bicycles, etc., through sensors such as cameras or radars while the vehicle is driving, and calculate the probability of collision based on the distance and relative speed to the obstacles. A vehicle-mounted safety assistance system that promptly sends out audible or visual signals to the driver based on the possibility and degree of danger to remind the driver to take measures such as avoidance or braking, thereby reducing or avoiding collision accidents. The role of anti-collision warning lenses is to improve driving safety and reduce the occurrence of traffic accidents. Anti-collision warning lenses can give different warning signals for different obstacles in different scenarios. For example, when driving at high speed, if the vehicle in front suddenly brakes or changes lanes to cut in line, the anti-collision warning camera can promptly issue a warning to prevent the vehicle in front from colliding; on urban roads, if there are pedestrians or bicycles crossing the road or occupying the lane, the anti-collision warning camera can The collision warning lens can issue a timely warning to avoid collision with pedestrians; in congested road conditions, if the distance between the vehicle and the vehicle in front is too close, the anti-collision warning lens can issue a timely warning to slow down and avoid collision.
