Anti-corrosion ventilation ducts refer to ductwork systems specifically designed to resist corrosion caused by chemicals, moisture, or other corrosive elements present in the air or environment. These ducts are commonly used in industrial or commercial settings where corrosive gases, vapors, or liquids are present, such as chemical processing plants, laboratories, or environments with high humidity. The construction of anti-corrosion ventilation ducts involves the use of corrosion-resistant materials that can withstand the corrosive effects of the surrounding environment. These materials often include stainless steel, fiberglass-reinforced plastic (FRP), or special coatings that provide a barrier against corrosion.
