Crawling (web scraping) is a data extraction technique used on a website: you create a script (a bot) that automatically fetches data, without you needing to do anything. Anti crawling mechanism is an important function for the website security. Most of the existing anti crawling methods are non real time detection, and the recognition accuracy is low. By analyzing the characteristics of Crawler, a real-time crawler detection method based on sliding time window is proposed, which improves the accuracy and efficiency of detection of non compliance with the rules of Crawler.
