The global Anti-Decubitus Airflow Mattresses market size is predicted to grow from US\$ 453 million in 2025 to US\$ 702 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Anti-decubitus airflow mattresses are specialized medical devices designed to prevent and treat pressure ulcers (bedsores) by providing dynamic pressure relief and maintaining skin integrity. These mattresses utilize advanced technologies, including alternating pressure and low air loss therapies. Alternating pressure mattresses feature air cells that periodically inflate and deflate to redistribute pressure points, enhancing blood flow and reducing the risk of tissue breakdown. Low air loss mattresses continuously blow air through tiny perforations on the surface, keeping the skin dry and cool by managing moisture and temperature. By combining these therapies, anti-decubitus airflow mattresses offer comprehensive care for bedridden or immobile patients, promoting comfort and preventing skin complications.

The Anti-Decubitus Airflow Mattresses market is experiencing significant growth, driven by the increasing need for effective pressure ulcer prevention and management solutions in healthcare settings. These specialized mattresses employ advanced technologies such as alternating pressure and low air loss systems to redistribute pressure, enhance blood circulation, and maintain skin integrity in patients with limited mobility. The demand is particularly strong in hospitals, long-term care facilities, and home healthcare environments, where patient comfort and the prevention of pressure injuries are paramount. Technological advancements, including the integration of smart sensors and automated pressure adjustments, are further enhancing the efficacy and appeal of these mattresses. As the global population ages and the prevalence of chronic conditions rises, the adoption of anti-decubitus airflow mattresses is expected to

continue its upward trajectory, supported by ongoing innovations and a growing emphasis on patient-centered care.
