An anti-eavesdropping jammer is a device that interferes, blocks, or confuses eavesdropping equipment from receiving and recording target sounds by emitting noise or signals of a specific frequency.

Typically, anti-eavesdropping jammers emit ultrasonic or noise signals that are imperceptible to the human ear. When the eavesdropping device attempts to capture the target sound, these ultrasonic or noise signals will mix with the target sound, making it impossible for the eavesdropping device to clearly record or identify the target sound.
