The global Anti-electromagnetic Radiation Materials & Fabric market size is predicted to grow from US$ 773 million in 2025 to US$ 1276 million in 2031; it is expected to grow at a CAGR of 8.7% from 2025 to 2031.

Since entering the technological age, all kinds of electronic products and electrical appliances around human beings will emit electromagnetic radiation. Electromagnetic radiation is listed as the fourth largest source of pollution by the World Health Organization and is an invisible 'killer' in human life. In order to prevent electromagnetic radiation from harming human health, anti-radiation materials are used. At present, the most convenient and effective way to prevent electromagnetic radiation is to use electromagnetic shielding. It is to use a metal mesh with good electrical conductivity and magnetic permeability to block the propagation of electromagnetic radiation through reflection and absorption effects. Generally speaking, the finer the metal mesh and the smaller the mesh, the better the shielding effect.

Globally, the main manufacturers of Anti-electromagnetic Radiation Materials & Fabric include Shanghai Tianxiang, Shanghai Yindun Textile Technology Co., Ltd and joyncleon,etc. Among them, Shanghai Tianxiang has the largest market share of nearly 50%. China is the largest market, holds a share over 90%.
