Anti-fingerprint nano protective coating is a thin, transparent nanotechnology-based layer applied to surfaces such as glass, stainless steel, ceramics, and plastics to resist fingerprint smudges, oil stains, and other contaminants. This coating creates a hydrophobic and oleophobic surface, making it much easier to clean while maintaining clarity and surface smoothness. It is commonly used on consumer electronics screens, kitchen appliances, automotive interiors, touch panels, and architectural glass.

The coating bonds at the molecular level, forming a durable barrier that is scratch-resistant, water-repellent, and chemical-resistant without affecting the appearance or texture of the base material. It enhances product aesthetics, reduces maintenance needs, and extends surface life.
