The global Anti-GFP Antibody market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Anti-GFP Antibody refers to an antibody that specifically recognizes and binds to green fluorescent protein (GFP). GFP is a naturally occurring protein that emits green fluorescence when exposed to light in the blue to UV range. It is widely used as a reporter molecule in molecular biology and cell biology research to visualize protein expression and localization in vivo. The Anti-GFP Antibody is used to detect and quantify GFP-tagged proteins in various experimental settings, including western blotting, immunofluorescence, and immunohistochemistry.

The industry trend for Anti-GFP Antibody has experienced significant growth due to the increasing use of GFP in genetic engineering, cell tracking, and fluorescence microscopy. The antibody is essential for researchers to validate the successful expression and functionality of GFP-tagged fusion proteins in their experimental systems. Furthermore, the development of more sensitive and specific Anti-GFP Antibodies, as well as the expansion of applications such as live-cell imaging and protein-protein interaction studies, is driving the demand for this product. As the field of fluorescent protein technology continues to advance, the industry trend for Anti-GFP Antibody is expected to remain strong.
