The global Anti-HPV Biologic Protein Dressing market size is predicted to grow from US\$ 470 million in 2025 to US\$ 679 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Anti-HPV Biologic Protein Dressing consists of biological protein gel and gel drug delivery device. Bio-protein gel is composed of hydroxyethyl cellulose (excipient), bio-functional protein, glycerin, and purified water. The gel drug delivery device is a packing type, which is suitable for reducing the local HPV viral load.

In the field of wound care products, people pursue more beautiful appearance and skin. After general surgery, plastic surgery, cesarean section and other operations, burns, and accidental trauma, low-end traditional dressings cannot meet some special functions, such as accelerating wound healing and preventing scars generation, etc., the demand for high-end modern dressings is therefore growing. Advanced wound dressing manufacturers continue to increase investment in research and development of high-end products, driving the structural transformation and upgrading of the entire industry.
