The global Anti-Icing and Icephobic Coatings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Anti-icing and icephobic coatings are specialized materials designed to prevent or minimize the accumulation of ice on surfaces exposed to cold and icy conditions. These coatings typically contain low-surface-energy materials that reduce the adhesion of ice to the surface, making it more difficult for ice to form or adhere. Anti-icing coatings may also incorporate additives or chemical treatments to actively prevent the formation of ice crystals. Icephobic coatings go a step further by promoting the easy release of ice that does form, allowing it to slide off the surface more readily. These coatings find applications in various industries, including aerospace, automotive, marine, and infrastructure, where the prevention of ice buildup is essential for safety, efficiency, and performance.

United States market for Anti-Icing and Icephobic Coatings is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
