Abstracts

The global Anti-IL-4R? Antibody market size is predicted to grow from US\$ 17309 million in 2025 to US\$ 37171 million in 2032; it is expected to grow at a CAGR of 11.8% from 2026 to 2032.

In 2025, global Anti-IL-4R? Antibody production reached approximately 61.92 M Units, with an average global market price of around 285 USD per Unit.

An anti-IL-4R? antibody is a monoclonal antibody designed to bind the interleukin-4 receptor alpha subunit (IL-4R?), a shared receptor component used by IL-4 and IL-13 signaling pathways. By blocking IL-4R?, these antibodies inhibit Type-2 (Th2) inflammation, reducing downstream allergic and eosinophilic immune responses, and are used or developed to treat Type-2 inflammatory diseases such as atopic dermatitis, asthma, chronic rhinosinusitis with nasal polyps, and related conditions.

Anti-IL-4R? antibodies have become a flagship modality in immunology because they address a persistent industry pain point in Type-2 inflammation: many patients with atopic dermatitis, asthma, chronic rhinosinusitis with nasal polyps, and related conditions remain symptomatic or dependent on corticosteroids despite conventional therapies, and they often cycle between organ-specific treatments that don't control the shared upstream biology. By blocking IL-4R?—the common signaling node for IL-4 and IL-13—this class offers a mechanism-based, “upstream” approach that can reduce inflammation across multiple tissues with a single targeted therapy, supporting durable disease control while potentially lowering steroid burden and improving quality of life in a way that is operationally feasible for long-term use. The market potential remains strong as Type-2 inflammatory diseases continue to be diagnosed earlier and treated more proactively, as new entrants compete on convenience, access, and tailored positioning in specific phenotypes, and as the pathway's central role enables expansion into additional indications where IL-4/IL-13 signaling is clinically meaningful,

sustaining a large and resilient opportunity.

The upstream raw materials for anti-IL-4R? antibody mainly include core biological materials such as recombinant IL-4R? antigen, engineered cell lines, and plasmids/vectors. Typical raw material suppliers include Thermo Fisher, Bio-Techne (Novus), Cytiva, Merck Millipore, etc. The downstream applications are mainly in the treatment of allergic dermatitis and respiratory diseases.

The production capacity of single-line anti-IL-4R? antibody varies greatly depending on the type of drug molecule, process complexity, equipment scale and production mode, and the industry gross profit margin is usually in the range of 60%-80%.

United States market for Anti-IL-4R? Antibody is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Anti-IL-4R? Antibody is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Anti-IL-4R? Antibody is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Global key Anti-IL-4R? Antibody players cover Sanofi, Connect Biopharma, Keymed Biosciences, Jiangsu Simcere Pharmaceutical, Genrix Bio, etc. In terms of revenue, the global two largest companies occupied for a share nearly % in 2025.
