Anti-iNOS Antibody is a monoclonal or polyclonal antibody that targets inducible nitric oxide synthase (iNOS), an enzyme involved in the production of nitric oxide (NO), which plays a role in various biological processes including inflammation, immune response, and cell signaling. This antibody is used in research to detect and study the expression of iNOS in tissue samples and cell cultures, providing insights into the activation of NO signaling pathways and the associated pathological conditions such as inflammation and cancer. It is also used in diagnostic tests to identify diseases where iNOS expression is dysregulated.

The global Anti-iNOS Antibody market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
