The global Anti-itch Drugs market size is predicted to grow from US\$ 3743 million in 2025 to US\$ 5156 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

An antipruritic ointment is a topical medication used to relieve itching (pruritus) of the skin. It works by reducing the sensation of itching and soothing the skin.

The market for anti-itch ointments is expected to grow steadily in the coming years due to several factors. First, the incidence of skin conditions that cause itchiness is increasing worldwide, largely due to environmental factors such as pollution and climate change. Additionally, an aging population is expected to drive demand for anti-itch ointments, as older adults are more likely to develop skin conditions that cause itchiness.
