The global Anti-Jamming market size is predicted to grow from US\$ 5076 million in 2025 to US\$ 6835 million in 2031; it is expected to grow at a CAGR of 5.1% from 2025 to 2031.

GPS Anti-Jamming protects GPS receivers from interference and intentional jamming. By the time the GPS signal reaches the Earth's surface is weak and is susceptible to being overcome by higher power Radio Frequency (RF) energy. Even a small jammer of about 10 Watts power can disrupt an unprotected C/A Code receiver for about 30 kilometers (line of sight). GPS Anti-Jamming uses power minimization to reduce the effect of interference and jamming so that the GPS receiver can continue to operate correctly.

GPS technology has revolutionized modern warfare. Military organizations regularly depend on satellite technology for accurate positioning, timing and communications.

But GPS signals received on Earth are weak and susceptible to interference and intentional jamming. Indeed, the signals are usually obscured by thermal noise and only observable with a tuned signal analyzer - in other words a GPS receiver.

A simple low power jammer, readily available via the World Wide Web, can overpower GPS signals within a large area, denying a position solution and timing.

Anti-jam systems are mainly used for land, sea, air (including unmanned aerial systems) in the military field.

The major players in the market are Rockwell Collins (U.S.), The Raytheon Company

(U.S.), NovAtel, Inc. (Canada), Cobham plc (U.K.), and Mayflower Communications Company, Inc. (U.S.), and others. For the major players of the Anti-Jamming market, Raytheon maintained its first place in the ranking. Raytheon accounted for 6% of the Global revenue market share, followed by Rockwell Collins with about 3% revenue market share.
