Anti-JNKs antibody is an immunoglobulin directed against JNKs (c-Jun N-terminal kinases, c-Jun N-terminal kinases). Such antibodies are usually produced by immunizing animals (such as mice, rabbits, etc.) and have the ability to specifically bind to JNKs proteins. JNKs are part of the MAPK (Mitogen-Activated Protein Kinases) family and are involved in regulating important biological processes such as cell growth, differentiation, and apoptosis. Anti-JNKs antibodies can be used in immunological techniques, such as Western blotting, immunohistochemistry, etc., to detect, localize and quantify the expression levels of JNKs in cells or tissues to further study their functions and related disease mechanisms.

The global Anti-JNKs Antibodies market size is projected to grow from US\$ 36.5 million in 2024 to US\$ 51.1 million in 2030; it is expected to grow at a CAGR of 5.8% from 2024 to 2030.

Because JNKs (c-Jun N-terminal kinases) play a key role in multiple biological processes such as apoptosis, inflammation, and tumorigenesis, the demand for anti-JNKs antibodies in scientific research and clinical applications continues to grow. Especially in tumor research and treatment, anti-JNKs antibodies have become an important research tool and treatment method. In addition to traditional scientific research fields, the application of anti-JNKs antibodies in drug development and clinical treatment is also expanding. For example, some anti-JNKs antibodies have been used to develop new anti-cancer drugs, showing good efficacy and prospects. In summary, the anti-JNKs antibody market has broad development prospects and huge market potential.
