Anti-light screen is a technology that can reduce the impact of external light on the screen display. The principle of anti-light screen is to use physical structure or optical coating to reduce the reflectivity of the screen surface while improving the light transmittance and contrast of the screen. Anti-light screens can effectively protect eyesight, relieve eye fatigue, and improve the clarity and color of the display. A common form of anti-light screen is a Fresnel screen, which is a hard screen that uses the principle of a Fresnel lens to focus light onto the screen. Fresnel screens can maintain high brightness and high contrast of the screen during the day or in strong light environments, and are suitable for use as projector screens.
