Anti-Müllerian hormone (AMH) is a glycoprotein hormone produced by granulosa cells of small, growing follicles in the ovary. AMH serum concentrations decline over women's reproductive lifespan, becoming undetectable approximately 5 years before menopause when the stock of primordial follicles is exhausted. Therefore, AMH has received increasing attention as a marker for ovarian reserves and has been shown to predict a woman's reproductive potential.

AMH levels have become a useful fertility assessment tool that helps guide women's fertility treatment and family planning decisions. AMH can also be used as a biomarker to diagnose polycystic ovary syndrome.
