The global Anti-myopia Eye Protection Lamp market size is predicted to grow from US\$ 3718 million in 2025 to US\$ 6690 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

In 2024, global Anti - myopia Eye Protection Lamp production reached approximately 100 million units, with an average global market price of around US\$ 35 per unit.

An anti - myopia eye protection lamp is a specialized lighting device designed to safeguard eyesight and prevent myopia. It utilizes advanced lighting technologies to offer high - quality illumination while minimizing adverse effects on the eyes. Key features often include flicker - free operation, which eliminates the rapid on - off blinking of light that can cause eye strain. The lamp also has a well - controlled color temperature, usually within a range that mimics natural daylight, providing a comfortable visual environment. Additionally, it reduces blue light emission, as excessive blue light can damage the retina over time. By ensuring uniform light distribution, it avoids creating bright spots or harsh contrasts that can tire the eyes. These lamps are especially beneficial for activities like reading, studying, and working, where long - term exposure to artificial light is required, helping to maintain good eye health and reduce the risk of developing myopia.

The market for anti - myopia eye protection lamps is driven by multiple factors. Firstly, the continuously increasing prevalence of myopia, especially among children and adolescents, has led parents and educational institutions to attach great importance to eye - friendly lighting, thus boosting the demand for such lamps. Secondly, the growing public awareness of eye health and the harmful effects of improper lighting on vision has made consumers more willing to invest in high - quality anti - myopia eye protection

lamps. Thirdly, technological advancements, such as the development of better LED light sources with improved color rendering and reduced blue light, enable the production of more efficient and effective anti - myopia eye protection lamps, attracting more users. Fourthly, the expansion of e - learning and remote work, which involve long - term use of electronic devices, further increases the need for good lighting to protect eyesight. Finally, the increasing disposable income of consumers allows them to afford these relatively high - priced but eye - protecting lighting products, promoting the growth of the anti - myopia eye protection lamp market.
