The research report highlights the growth potential of the global Anti-Overflow Adhesive Special Film market. Anti-Overflow Adhesive Special Film are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Anti-Overflow Adhesive Special Film. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Anti-Overflow Adhesive Special Film market.

Anti overflow adhesive special film is an important process material used in the production process of flexible circuit boards. Flexible circuit boards are mainly made by hot pressing and bonding materials such as metal conductor foil, thermosetting adhesive, and insulation substrate film. From the perspective of manufacturing technology, if the above materials are directly hot pressed, on the one hand, the thermosetting adhesive will overflow from the insulation substrate film and cover the surrounding metal conductor foil after being hot pressed, making it impossible to carry out subsequent surface gold plating or gold plating treatment on the metal conductor foil, as well as subsequent component welding; On the other hand, direct processing under high temperature and pressure can easily lead to the adhesion of the insulation

substrate film to the pressing panel of the hot press, resulting in damage or wrinkling of the flexible circuit board. Therefore, during the hot pressing process of flexible circuit boards, a layer of anti overflow adhesive special film needs to be placed between the pressing panel and the flexible circuit board to play a role in anti overflow, release, anti wrinkle, protection, etc.
