Abstracts

The global Anti-Plasma Yttrium Oxide Coatings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Yttrium oxide thermal spray coat is used in semiconductor and liquid-crystal-display (LCD) fabricating equipments, and demanded high purity more than 99.99% to prevent from contaminations. FUJIMI thermal spray powder are manufactured under very strict quality control, and supply our customer with yttrium oxide of high quality and purity.

Powder coatings lack solvents, giving way to negligible volatile organic compound (VOC) emission into the atmosphere and reducing the risk of combustion during their usage and storage process. In addition, the powder can be easily washed when exposed to human skin, which reduces the risk of health problems for operators. ETFE is excellent in processability and able to form a thick and non-stick film layer with electrical, mechanical and chemical strength. FEP and PFA Coating Powder are low in melt viscosity and excellent in melt fluidity which can give a coating free of pinholes.
