Anti-rabies serum is a biological product that is used to prevent and treat rabies infection. It is made from the blood of animals that have been immunized against the rabies virus. The serum contains antibodies that can neutralize the virus and prevent it from causing disease.

The development prospects of anti-rabies serum are promising. Advances in biotechnology and immunology have led to the development of new techniques for producing and purifying antibodies. These techniques have made it possible to produce high-quality anti-rabies serum that is safe and effective.

In addition, there is a growing demand for anti-rabies serum in many parts of the world, particularly in developing countries where rabies is still a major public health problem. This demand has led to increased investment in research and development of new anti-rabies serum products.
