## Abstracts

The global Anti-Soluble Aqueous Film-Forming Foam Fire Extinguishing Agent market size is predicted to grow from US\$ 49.73 million in 2025 to US\$ 64.42 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Anti-soluble aqueous film-forming foam fire extinguishing agent is a special foam liquid used to extinguish fires. It has anti-soluble properties, which makes it show good fire extinguishing effect in liquid fires containing polar solvents (such as alcohols). This foam fire extinguishing agent forms a water film on the surface of the fire source to isolate oxygen, and can form a stable foam layer on the oil surface to prevent the flame from re-igniting. It is widely used in fire protection in petrochemical, chemical, oil depot and other places.

The market for anti-soluble aqueous film-forming foam fire extinguishing agents is currently growing steadily, mainly driven by the increased demand for firefighting in the industrial and energy sectors and the promotion of environmental protection regulations. With its high efficiency in fire extinguishing and alcohol resistance and anti-solvent properties, this fire extinguishing agent is particularly suitable for petrochemical, oil and gas, transportation and storage and other fields. In the future, with the strengthening of sustainable development and environmental protection requirements, the market demand for innovative products with low toxicity and low environmental impact will increase, which will drive the development and application of environmentally friendly fire extinguishing agents and provide further opportunities for market expansion.
