Anti-spatter adhesion agents are solvents used to prevent 'spatter' generated during welding operations from adhering to the weld metal. To remove them, a trowel or a jet trowel using compressed air must be used. Anti-spatter adhesion agents facilitate this process.

By spraying it on the welding area before welding work, it prevents the adhesion of spatter. Even if spatter adheres, it can be removed with a wire brush. The use of a trowel is no longer necessary, and workability is improved.

The global Anti-Spatter Adhesion Agent market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
