The global Anti Squeak and Friction Noise Reduction Additives market size is predicted to grow from US\$ 411 million in 2025 to US\$ 627 million in 2032; it is expected to grow at a CAGR of 5.7% from 2026 to 2032.

Low Noise Anti Squeak Additives are a class of specialty chemical compounds engineered to mitigate friction-induced acoustic phenomena (specifically stick slip vibration) at contacting interfaces of thermoplastics, elastomers, leather, and coated surfaces. In 2025, global anti squeak and friction noise reduction additives production reached approximately 23,328 ton, with an average global market price of around USD 18,000 per ton. A factory gross profit of USD 4,500 per ton with 25% gross margin. A single line full machine capacity production is around 450 ton per line per year. downstream demand is concentrated in automotive, industrial and consumer electronics. In modern EVs, anti-squeak additives are integrated into polypropylene and ABS door panel assemblies to prevent frictional noise between trim interfaces during thermal expansion. China and India are leading due to large vehicle production.
