The global Anti-Static Blowers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Anti-static fans contain the power supply and fan in the same product, thus achieving long-distance static elimination without the need for an external air source. Ionizing fans generate an ambient electric field that ionizes air molecules into positive and negative ions, thereby neutralizing positive and negative ions within a range of 1000-1500 mm. Thus, static damage is prevented. Since the fan is located at the back, it circulates air in the environment, thus generating ionized air for a precise static elimination solution. Static eliminator fans are particularly useful in applications where high static electricity is distributed over a large surface area.
