Anti static hand lotion is a specialized lotion or cream that is applied to the hands to reduce or eliminate static electricity. It is designed to provide a temporary anti-static barrier on the skin, helping to prevent static shocks and reducing the attraction of static charges to the hands.

Anti-static hand lotions typically contain ingredients that have anti-static properties, such as moisturizers and humectants that help to retain moisture in the skin. These lotions often also contain ingredients that can dissipate or neutralize static charges, such as conductive polymers or inhibitors.

The lotion is applied to the hands and rubbed in, coating the skin with a thin protective layer. This layer helps to minimize the build-up of static charges and can provide a more comfortable working environment in industries where static electricity can be a problem, such as electronics manufacturing, laboratories, or cleanroom environments.
