The global Anti-Static Polycarbonate Sheet market size is predicted to grow from US\$ 2756 million in 2025 to US\$ 4257 million in 2032; it is expected to grow at a CAGR of 6.5% from 2026 to 2032.

In 2024, global Anti-Static Polycarbonate Sheet production reached approximately 81,538,462 square meters , with an average global market price of around UUS\$32.50 per square meter.

Anti-Static Polycarbonate Sheets are engineered thermoplastic panels that combine the inherent impact resistance and transparency of polycarbonate with static-dissipative properties. These sheets are treated or compounded with anti-static agents to maintain surface resistivity between 10^6 to 10^9 ohms, preventing electrostatic charge buildup and discharge that could damage sensitive electronics or create hazardous conditions. Featuring excellent optical clarity, high impact strength, and superior dimensional stability, anti-static PC sheets are widely used in cleanrooms, electronic manufacturing, medical device packaging, and industrial applications where both static control and durable transparent barriers are required. They offer superior performance in harsh environments while maintaining ESD safety standards.

The anti-static polycarbonate sheet market is growing steadily due to the expanding electronics manufacturing sector and increasing demand for ESD protection in sensitive environments. Technological advancements in anti-static coating technologies are enhancing the performance and durability of these sheets. The rise of cleanroom applications in pharmaceuticals and biotechnology is creating new market opportunities. Stringent ESD safety regulations across industries are driving the adoption of standardized anti-static materials. The shift toward miniaturized electronics requiring

more stringent static control measures is boosting market demand.
