The global Anti-static PVC Sheet market size is predicted to grow from US\$ 1640 million in 2025 to US\$ 2500 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

In 2024, global Anti-static PVC Sheet production reached approximately 56.4 million square meters, with an average global market price of around US\$ 28 per square meter.

Anti-static PVC Sheets are specialized polyvinyl chloride sheets infused with anti-static agents or conductive materials to dissipate static electricity, preventing electrostatic discharge (ESD) that could damage sensitive electronic components. They feature smooth surfaces, chemical resistance, and easy processing, widely used as workbenches, packaging materials, and wall panels in electronics manufacturing, semiconductor labs, and cleanroom environments.

The global Anti-static PVC Sheet market is driven by the rapid expansion of the electronics and semiconductor industries, where ESD protection for sensitive components is critical. Growing demand for cleanroom facilities in healthcare and aerospace sectors further boosts market growth. Advancements in anti-static agent technology have improved the sheet's durability and static dissipation performance. Rising adoption of automated production lines in electronics manufacturing increases the need for consistent anti-static work surfaces. Additionally, strict regulatory standards for ESD safety in electronic component handling push enterprises to adopt qualified anti-static PVC sheets.
