Anti-static zippers are specially designed zippers that are used to reduce or prevent the generation or accumulation of static electricity during the zipping process. This kind of zipper is usually made of materials with anti-static properties, or it is coated with a special anti-static coating on the surface to provide anti-static functions. The main purpose of anti-static zippers is to prevent the generation or accumulation of static electricity and reduce the possible interference or damage caused by static electricity to the surrounding environment or devices. They are usually used in situations where static control is required, such as electronic equipment, chemical laboratories, clean room environments, etc.

The global Anti-Static Zipper market size is projected to grow from US\$ 730 million in 2024 to US\$ 1062 million in 2030; it is expected to grow at a CAGR of 6.4% from 2024 to 2030.
