The antibacterial infusion patch is a medical accessory used to secure infusion needles while providing antibacterial protection, effectively preventing infections at the puncture site.

The antibacterial infusion patch market encompasses specialized adhesive patches infused with antibacterial agents designed to prevent or treat infections at wound, infusion, or surgical application sites. These patches provide localized antimicrobial delivery, reducing the risk of contamination and promoting healing without systemic exposure. Commonly used in hospital and clinical settings, their development emphasizes advanced materials—such as nano-silver particles or chlorhexidine—to enhance efficacy and biocompatibility. Innovations in smart patches (e.g., integrating sensors) and biodegradable designs reflect growing focus on infection control, patient comfort, and sustainability .
