Antibacterial PPR pipe is a functional pipe made by adding antibacterial agents (such as silver ions, zinc ions, nano oxides, etc.) to traditional polypropylene random copolymer (PP-R) pipes. Its antibacterial components are usually evenly dispersed in the inner layer or middle layer of the pipe in the form of masterbatch during the production process, which can actively inhibit the growth of bacteria, fungi and algae on the inner wall of the pipe, prevent the formation of biofilm, and ensure water quality safety. Compared with ordinary PPR pipes, antibacterial PPR pipes have higher hygienic properties and long-term stability, and are particularly suitable for places with strict water quality requirements, such as hospitals, schools, food processing plants, etc. Its antibacterial effect is usually verified by standards such as ISO 22196 or GB/T 31402, and the antibacterial rate can reach more than 99%.

United States market for Antibacterial PPR Pipe is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
