The global Antibody market size is predicted to grow from US\$ 9853 million in 2025 to US\$ 13580 million in 2031; it is expected to grow at a CAGR of 5.5% from 2025 to 2031.

Monoclonal Antibodies (IgMs) are antibodies that are made by identical immune cells, cloned from a single parent cell. They are therefore of constant structure and bind to the same foreign markers (called “antigens”). The technology behind the generation of monoclonal antibodies was discovered in 1972 by César Milstein and Georges Köhler – scientists at the Roche-funded Basel Institute for Immunology – who were later to win the Nobel Prize. Monoclonal antibodies revolutionized biological research and built the basis for the use of therapeutic antibodies in medicine and for the entire biotechnology industry.

Global Monoclonal Antibodies key players include Roche, Johnson and Johnson, Merck, Novartis, AbbVie, etc. Global top five players hold a share about 35%.

North America is the largest market, with a share about 50%, followed by Europe and Asia-Pacific, having a total share about 45 percent.

In terms of product, IgG is the largest segment, with a share about 80%. And in terms of application, the largest application is Research, followed by Therapeutic and Diagnostic.
