Antibody purification refers to the process of isolating and obtaining high-purity antibody proteins from cell culture media, serum, or tissue extracts. Its core purpose is to remove impurities (such as other proteins, nucleic acids, salts, etc.) to obtain structurally intact and functionally active target antibodies. Commonly used methods include protein A/G affinity chromatography, ion exchange chromatography, molecular sieve chromatography, and affinity tagging purification. This process is crucial in biopharmaceuticals, diagnostic reagents, and scientific research, and is a key step in ensuring the safety, efficacy, and consistency of antibody drugs. Sales volume in 2025 is projected at 1.25 million units, with an average price of \$115 per unit. Total production capacity is 1.5 million units, with a gross profit margin of 85%.
