Anticoagulants, commonly referred to as blood thinners, are substances that prevent or reduce coagulation of blood, prolonging the clotting time. Some of them occur naturally in blood-eating animals such as leeches and mosquitoes, where they help keep the bite area unclotted long enough for the animal to obtain some blood. As a class of medications, anticoagulants are used in therapy for thrombotic disorders. Oral anticoagulants (OACs) are taken by many people in pill or tablet form, and various intravenous anticoagulant dosage forms are used in hospitals. Some anticoagulants are used in medical equipment, such as test tubes, serum-separating tubes, blood transfusion bags, and dialysis equipment.

Market competition is intense. Sanofi, Bristol-Myers Squibb, Bayer, Johnson & Johnson, Genentech (Roche) and Boehringer Ingelheim etc. are the leaders of the industry, with about 64% market shares.

North America is the largest consumption place, with a consumption market share nearly 39%. Following North America, Europe is the second largest consumption place with the consumption market share of 26%.
