Anticorrosion controllers are electronic control units used to monitor and regulate corrosion protection systems such as impressed current cathodic protection (ICCP), sacrificial anode systems, and corrosion monitoring networks in pipelines, tanks, marine structures, and reinforced concrete assets. In 2025, the average global unit price of anticorrosion controllers is approximately US\$2,600 per unit, with global annual sales volume and production both estimated at around 0.48 million units. The industry typically maintains a gross margin range of 35%–55%, driven by control algorithm reliability, power electronics design, sensor integration capability, compliance with industry standards, and long-term field stability. The supply chain includes upstream components such as power modules, control boards, sensors, enclosures, and communication modules; midstream manufacturers focus on system design, firmware development, assembly, calibration, and environmental testing; downstream users include oil and gas pipeline operators, water utilities, chemical plants, marine and offshore operators, infrastructure owners, and corrosion engineering service providers.
