Antiemetic Tablet is an oral pharmaceutical preparation formulated to prevent or relieve nausea and vomiting. Depending on the formulation, products may be conventional tablets, film-coated tablets, orally disintegrating tablets, or other immediate-release forms. They are used for conditions such as postoperative nausea, motion sickness, gastrointestinal disorders, medication-related nausea, and treatment-associated nausea according to approved indications. The product scope covers finished oral antiemetic tablets sold in multi-dose bottle packaging and excludes injectable, liquid, and transdermal antiemetic products.

The industry chain begins upstream with pharmaceutical active ingredients, fillers, binders, disintegrants, lubricants, coating materials, and bottle packaging components. Midstream manufacturers conduct material preparation, blending, granulation, drying, compression, coating, inspection, bottle filling, labeling, and quality testing to produce finished antiemetic tablets. Production focuses on dosage uniformity, dissolution

performance, chemical stability, purity, and pharmaceutical compliance. Downstream products are distributed through hospitals, pharmacies, clinics, wholesalers, retail channels, and e-commerce platforms. Major applications include postoperative care, motion sickness, gastrointestinal conditions, treatment-related nausea, and other approved indications requiring oral antiemetic therapy.
