An antiknock agent is a gasoline additive used to reduce engine knocking and increase the fuel's octane rating by raising the temperature and pressure at which auto-ignition occurs.

Antilock agents have been increasingly becoming one of the most important vehicle safety concerns for the consumers and vehicle manufacturing companies. While inclusion of antilock agents in the vehicles has become mandatory by law in most of the developed countries, with the increasing consumer awareness the developing countries are increasingly including them in their vehicles. The New Car Assessment Program (NCAP), a government car safety program which evaluates new automobile designs for performance against various safety threats has been instrumental in the increasing market for antilock agents. NCAP awards the vehicle designs with safety ratings based on their safety profile.
