The Antimicrobial Additives for Plastic portfolio helps keep polymer products and surfaces clean by inhibiting the growth of bacteria and mold. Antimicrobial Additives for Plastic are incorporated into plastic products at the time of manufacture and provide continuous protection for the expected life of the product. Antimicrobial Additives for Plastic can be added to various polymers (e.g., vinyl, rubber, latex, PP, PS, ABS) in various consumer products and can be easily molded or extruded as part of the manufacturing process. Protecting your bath products, kitchen products, appliances and food storage containers with antimicrobial plastic additives can prevent product spoilage, stains, odors and bacterial growth due to the presence of microorganisms. Microorganisms are known to attract and attack untreated plastics, causing discoloration and odors. This plastic can be bonded to the plastic resin during the molding process and provides a biocide treatment for microbiological control. Antimicrobial Additives for Plastic is manufactured through a strict process to ensure the quality of antimicrobial additives.

The global market for antimicrobial additives in plastics has been experiencing significant growth in recent years. This can be attributed to the increasing awareness about the importance of hygiene and infection control in various industries, including healthcare, packaging, consumer goods, and construction. Antimicrobial plastics are widely used in applications such as medical devices, food packaging, textiles, and building materials.
