Antimicrobial catheters refer to catheters coated or infiltrated with antibacterial drugs, disinfectants, and metal-containing preparations. Anti-infective substances may coat the catheter, or attach to the catheter by chemical bonding. The anti-infection principle of the catheter is that when the catheter is exposed to blood, body fluids or other liquids, the anti-infective substance will be released around the catheter to form an anti-infective environment to resist microorganisms, thereby preventing the propagation and migration of bacteria colonizing the catheter.

Medical Catheters are tubes that can inserted into a body cavity, vessel or duct, usually

to allow for the administration of fluids, medications or gases or to drain fluids or urine from the body.
