According to our LPI (LP Information) latest study, the global Antimicrobial Peptides market size was valued at US\$ 5 million in 2023. With growing demand in downstream market, the Antimicrobial Peptides is forecast to a readjusted size of US\$ 7 million by 2030 with a CAGR of 5.6% during review period.

The research report highlights the growth potential of the global Antimicrobial Peptides market. Antimicrobial Peptides are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Antimicrobial Peptides. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Antimicrobial Peptides market.

Antimicrobial peptides (AMPs), also called host defense peptides (HDPs) are part of the innate immune response found among all classes of life. Fundamental differences exist between prokaryotic and eukaryotic cells that may represent targets for antimicrobial peptides. These peptides are potent, broad spectrum antibiotics which demonstrate potential as novel therapeutic agents. Antimicrobial peptides have been demonstrated to kill Gram negative and Gram positive bacteria, enveloped viruses, fungi and even transformed or cancerous cells. Unlike the majority of conventional antibiotics it appears that antimicrobial peptides frequently destabilize biological membranes, can form transmembrane channels, and may also have the ability to enhance immunity by functioning as immunomodulators.

The major players in the industry are AnaSpec, AMP Biotech, Phoenix Biotech and Novabiotics, with revenues of about 7%, 9%, 3% and about 26% respectively in 2019.

By region, North America had the highest share of sales, at about 35%.
