The global Antimicrobial Peptides Service market size is predicted to grow from US$ 5.4 million in 2025 to US$ 6.6 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

Antimicrobial peptides (AMPs), also called host defense peptides (HDPs) are part of the innate immune response found among all classes of life. Fundamental differences exist between prokaryotic and eukaryotic cells that may represent targets for antimicrobial peptides. These peptides are potent, broad spectrum antibiotics which demonstrate potential as novel therapeutic agents. Antimicrobial peptides have been demonstrated to kill Gram negative and Gram positive bacteria, enveloped viruses, fungi and even transformed or cancerous cells. Unlike the majority of conventional antibiotics it appears that antimicrobial peptides frequently destabilize biological membranes, can form transmembrane channels, and may also have the ability to enhance immunity by functioning as immunomodulators.

The major players in the industry are AnaSpec, AMP Biotech, Phoenix Biotech and Novabiotics, with revenues of about 7%, 9%, 3% and about 26% respectively in 2019.

By region, North America had the highest share of sales, at about 35%.
